There is an amazing opportunity for all skygazers to experience a rare astronomical event, called the 'black moon,' before the end of the year.

This is the second new moon of the month, which will occur today, December 30, 2024. It promises a darker night sky which is perfect for gazers observing stars and planets.

The black moon is not officially recognised in [astronomy](#), but it has gained popularity over the years among amateur astronomers and stargazers.

What is the timing of the Black Moon?

According to the US Naval Observatory, the unique phenomenon will occur on December 30, at 5.27 ET. America can watch it on December 30, while for Europe, Africa and Asia, this event will be visible on December 31, 2024.
